- 6) Other: \_\_\_\_\_

***Election/Restrictions***

1. Applicant's election without traverse of claims 1, 2, 5, 7 and 8 in the reply filed on 11/17/2009 is acknowledged.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 5, and 7-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Asato (US Pat. No. 7, 302, 158).

Regarding claim 1, Asato teaches a non-linear editing device, comprising: a random accessible and detachable first material storage part; a random accessible second material storage part; a material reference management part for managing a reference to a material file from a clip that is a direct operation object used by a user for accessing the material file stored in at least one of the first material storage part and the second material storage part (see col. 14 line 63-col. 15 line 2, operation input signal is inputted by the user to the CPU 53, thus the CPU reads out A/V data (material file) stored on HDD by making reference to file management, see also figure 1); and a material copy management part for copying a copy original material file stored in the first material storage part to the second material storage part as a copy destination material file, and requesting the material reference management part to change reference information so as to

allow a clip referring to the copy original material file to refer to the copy destination material file (see col. 14 lines 55-62 and col. 15 lines 3-61 second material data inserted, referring the original file to refer to destination file).

Regarding claim 2, Asato discloses the material reference management part includes: a material location table expressing a corresponding relation between a material ID for uniquely identifying the material file and a material location specifying a storage place of the material file (see figure 7 and col. 18 line 52-col. 19 line 21); and a clip material reference table expressing a corresponding relation between the clip and a material ID to which the clip refers (see col. 10 lines 23-51).

Regarding claim 5, Asato teaches the material reference management part includes a clip material reference table expressing a corresponding relation between the clip and a material location specifying a storage place of the material file to which the clip refers (see figures 6A-C, 7-8 and col. 11 line 55-col. 12 line 16).

Regarding claim 7, Asato teaches the material copy management part copies at least a material file that is to be edited among the copy original material files stored in the first material storage part to the second material storage part as the copy destination material file (see abstract, col. 14 line 50-col. 15 line 17).

Regarding claim 8, Asato teaches the material reference management part manages a reference starting point and a reference termination point of the material file to which the clip refers to (see figure 10 and col. 14 lines 16-46); and the material copy management part copies a region including a section designated by the reference starting point and the reference termination point designated by editing in the copy original material file stored in the first

material storage part to the second material storage part as the copy destination material file (see col. 13 line 55-col. 14 line 32 and figure 15), and requests the material reference management part to change reference information so as to allow the clip referring to the copy original material file to refer to the same section of the copy destination material file (see col. 14 lines 33-46).

***Conclusion***

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to HELEN SHIBRU whose telephone number is (571)272-7329. The examiner can normally be reached on M-F, 8:30AM-5PM.
